
MINI-M0™

development board for STM32

The whole STM32 development board fitted in DIP40 form factor, containing high-performance STM32F051R8 ARM Cortex-M0 microcontroller.

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

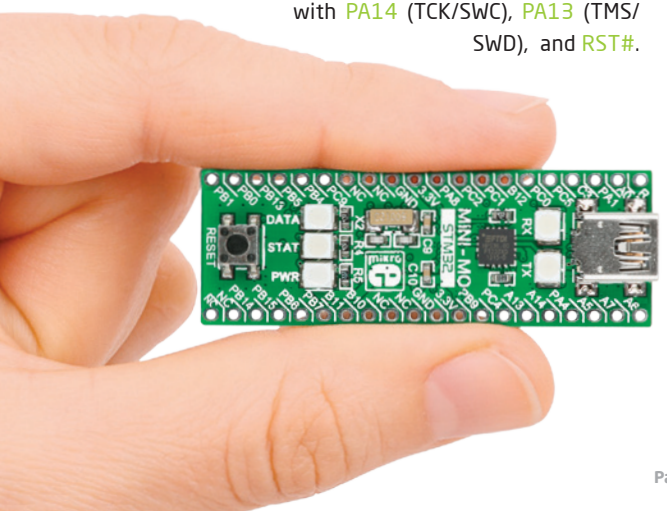
Table of Contents

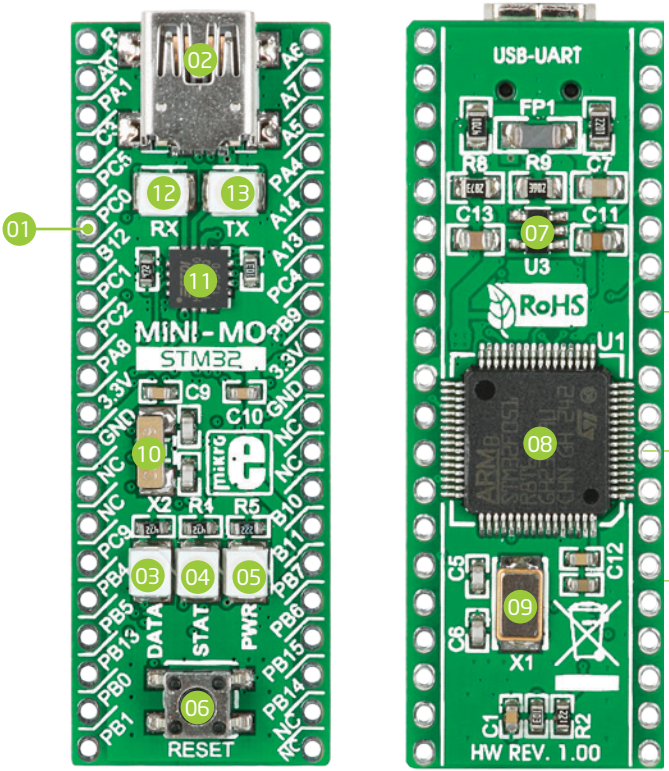
Introduction to MINI-M0 for STM32

Miniature and high-performance development tool designed to work as stand alone device or as MCU card in DIP40 socket. MINI-M0 for STM32 is preprogrammed with USB-UART bootloader so it is not necessary to have external programmer. If there is need for external programmers (mikroProg™ or ST-LINK V2) attach it to MINI-M0 for STM32 via pads marked with PA14 (TCK/SWC), PA13 (TMS/SWD), and RST#.



Key features

01 Connection Pads
02 USB MINI-B connector
03 DATA LED
04 STAT LED
05 POWER supply LED
06 Reset button
07 Power supply regulator
08 Microcontroller STM32F051R8
09 16 MHz Crystal oscillator
10 32.768kHz Crystal oscillator
11 FTDI FT230x chip
12 UART RX LED
13 UART TX LED



System Specification

power supply

3.3V via pads or 5V via USB

power consumption

depends on MCU state (max current into 3.3V pad is 300mA)

board dimensions

50.8 x 17.78mm (2 x 0.7")

weight

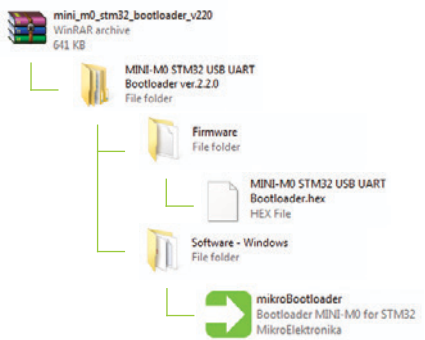
~6g (0.013 lbs)

1. Programming with mikroBootloader

You can program the microcontroller with bootloader which is preprogrammed into the device by default. To transfer .HEX file from a PC to MCU you need bootloader software (**UART mikroBootloader**) which can be downloaded from:

http://www.mikroe.com/downloads/get/2055/mini_m0_bootloader_v220.zip

After software is downloaded unzip it to desired location and start mikroBootloader USB UART software.



mikroBootloader software

note *Before starting mikroBootloader software, connect MINI M0 for STM32 to a PC using a USB cable provided with the package*

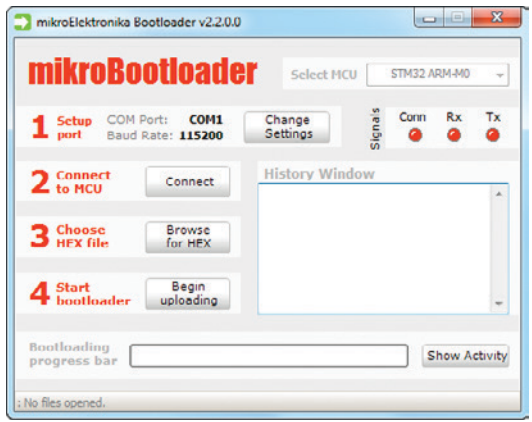


Figure 2-1: mikroBootloader window

01 When you start mikroBootloader software, a window as shown in **Figure 2-1** should appear

Identifying device COM port

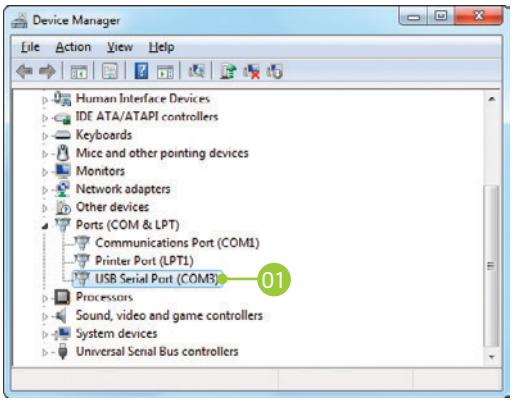

Figure 2-2: Identifying COM port

01 Open **Device Manager** window and expand **Ports section** to see which COM port is assigned to MINI M0 for STM32 (in this case it is COM3)

step 1 - Choosing COM port

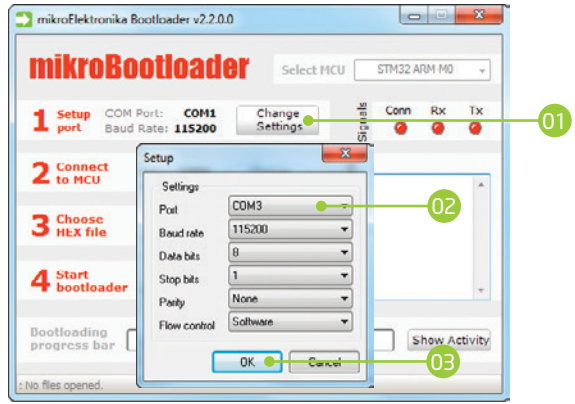

Figure 2-3: Choosing COM port

01 Click the **Change Settings** button

02 From the drop down list, select appropriate COM **port** (in this case it is COM3)

03 Click **OK**

step 2 - Establishing Connection

Figure 2-4: Connecting with mikroBootloader

01 Press the **Reset** button on MINI M0 for STM32 board and click the **Connect** button within 5s, otherwise the existing microcontroller program will run. If connected, the button's caption will be changed to **Disconnect**

step 3 - Browsing for .HEX file

Figure 2-5: Browse for HEX

01 Click the **Browse for HEX** button and from a pop-up window (Figure 2-6) choose a .HEX file to be uploaded to MCU memory

step 4 - Selecting .HEX file

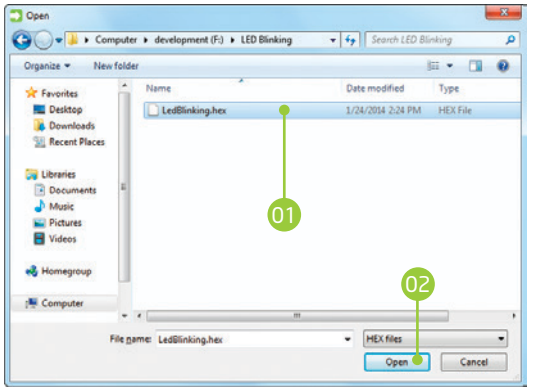

Figure 2-6: Locating and selecting .hex file

01 Select .HEX file using open dialog window.

02 Click the **Open** button

step 5 - Uploading .HEX file

Figure 2-7: Begin uploading

01 To start .HEX file bootloding click the **Begin uploading** button
